

Assignment 2

Build an application with a list of items (e.g., Animal/plant/any object, predefined list recommended) such that clicking the particular item goes to another page **within your application and uses WebView** to open the Wikipedia of the item.

- Use INTERNET permission in manifest
- Minimum number of items in the list should be 5
- Clicking on an item must NOT go to external chrome or any other browser application
- Each list item must be clickable

UI components (recommended):

One list on home page and child page for every item

OR

One list on home page and only one child page retrieving wiki based on index of item selected.
